

SafeStand® Access Systems

Newsletter 2

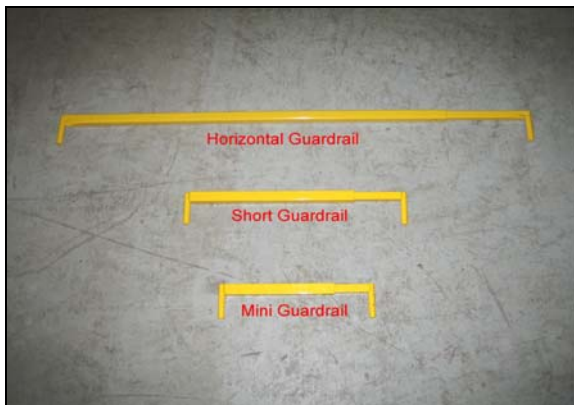

“Corners”

Are you aware that SafeStand® Access Systems can be erected around corners? It can be utilised on both internal and external corners.

SafeStand® have added a “Mini Guardrail” to the list of components which; whilst not required in every corner set up; allows you the flexibility to erect the working platform around a corner whilst maintaining the requirement for fully guarded leading edges. The width of the anti-flip bracket has also been increased. This ensures that no

“trap” or risk of boards tipping up is created, when the system is erected at 90°. It also means that overlapping of boards on the corner is not required, removing the trip hazard that would normally be created on corners when using other access systems.

DID YOU KNOW?

- SafeStand® Access Systems are available in three different starting heights; 500, 800 & 1200 systems.
- Brickguards to suit our systems are available for sale.
- All new anti-flip brackets are now being manufactured to an increased width to allow working platforms to be erected on corners.
