

SafeStand® Access Systems

Newsletter No. 6

SafeStand® have over recent months, been developing a staircase to use in conjunction with SafeStand® 1200 system. The result is a fold flat staircase with handrails that can be used with SafeStand Access Platforms at a height of 1340mm to 2200mm.

The SafeStand® Staircase has been designed along the same principles as all SafeStand® equipment such that no tools are required to erect or dismantle the system. It is a two man operation to install the staircase which folds flat when not in use for ease of movement about the site. The handrails are removable and also fold flat when not in use. The staircase support bracket simply slots over a rest bar which is inserted between two stands at the access point. The SafeStand® Staircase comes in two sizes; 6 Tread and 9 Tread.

For any further information please contact SafeStand® as detailed below.
